Charges for 1st April 2026 to 31st March 2027

What We Offer

Our clinic offers treatment to patients who fulfil NHS Scotland criteria for NHS funded treatment, as well as to those who do not meet NHS criteria and wish to self-fund.

The treatment we provide is the same regardless of source of funding method.

NHS Criteria for Funding

Patients seeking NHS funded treatment must meet NHS Scotland criteria for funding. This is available on our website https://www.nhsgrampian.org/service-hub/aberdeen-fertility-centre/funding-your-treatment/nhs-funded/.

Charges for Self-Funded Treatment

Charges for self-funded treatment will vary depending on the specific investigations and treatment you have. Broadly speaking, charges will include the costs of consultations, investigations, screening tests, agreed treatment cycle, medication, freezing and any storage of eggs, sperm or embryos.

Before you begin any treatment, we will discuss treatment options with you and you will be given a detailed breakdown of charges. Below is meant only as an approximate guide of likely charges for the range of treatments we offer:

Your first round of IVF or ICSI	In the range of £5,660 - £6,160 depending on medication and duration of storage of eggs, sperm or embryos
IUI Cycle	In the range of £1,230 - £1,460
Egg Freezing	In the range £4045 - £4540 depending on medication and duration of storage of eggs
Sperm freezing	In the range £740 - £2,625 depending on duration of storage of sperm
Egg Recipient	Approximately £9,475
Embryo Recipient	Approximately £6,100
Surrogacy	Approximately £8,240 - £10,300

Please see below for the full list of charges.

All indicative prices do not include storage fees.

Full List of Charges

Initial Consultation & Investigations

Before any treatment can take place, you will need a consultation with a doctor at the clinic. As part of the consultation, you may also need to have some investigations and/ or screening tests:

Initial consultation (video consultation)	£270.00
Initial consultation with diagnostic ultrasound scan	£474.00
Initial consultation with diagnostic ultrasound scan & semen analysis	£634.00
Diagnostic ultrasound scan	£204.00

Possible Investigations for a Patient

Hysterosalpingo Contrast Sonography (HyCoSy)	£448.00
Anti-Mullerian Hormone (AMH) Testing	£119.00
Karyotype (genetic) testing	£420.00
Cystic Fibrosis screening	£60.00
Thalassemia (genetic) testing	£76.00

Possible Investigations for a Partner

Semen Analysis	£160.00
Sperm Freezing	£319.00
Sperm Freezing (with 1 year storage)	£594.00
Karyotype (genetic) testing	£420.00
Cystic Fibrosis Screening	£60.00
Thalassemia (genetic) testing	£76.00

Treatment - IVF/ICSI

The charges for IVF and ICSI treatment are shown below, which include:

- consultation for consents, plus nurse appointment for medication
- all monitoring
- egg collection
- embryo transfer
- a follow-up appointment/ pregnancy scan

The 1st IVF/ICSI cycle must have been completed in our centre to qualify for the reduced 2nd (or more) IVF/ICSI cycle price. You will be entitled to the reduced 2nd (or more) IVF/ICSI cycle price if your 1st IVF/ICSI cycle was NHS funded.

1st IVF/ICSI cycle	£4,909.00
2nd (or more) IVF/ICSI cycle	£4,397.00

HFEA Charge applies where gametes are mixed with intention of creating embryos	£120.00

Counselling is free of charge.

You will also need to make provision for medication charges. Medication charges are detailed below in the 'Medication Charges' section.
If you plan to freeze and store eggs, sperm, or embryos, then storage charges will also apply. Freezing and storage charges are detailed below in the section 'Freezing and Storage for Eggs, Embryos and Sperm'.

Treatment - Frozen Replacement Cycle with Medication (HRT)

Performed if you already have embryos in storage- for example after a previous round of IVF or ICSI.

The charge includes:

- consultation for consents, plus nurse appointment for medication
- all medication
- monitoring
- embryo transfer
- a follow-up appointment/ pregnancy scan
- Luteal support

Per frozen cycle	£2,207.00
HFEA Charge (only charged if transfer takes place)	£120.00
If after embryo transfer, you have a positive urine pregnancy test, you will require additional 9 weeks of luteal support medication	£1,168.00

Treatment - Frozen Replacement Cycle (Natural/Modified Natural)

Performed if you already have embryos in storage- for example after a previous round of IVF or ICSI.

The charge includes:

- consultation to check consents and any nurse appointment
- monitoring
- embryo transfer
- a follow-up appointment/ pregnancy scan
- Luteal support

Per frozen cycle	£1,808.00
HFEA Charge (only charged if transfer takes place)	£120.00

Treatment – Natural Intra Uterine Insemination (IUI) Treatment Cycle

The charge includes:

- nurse appointment
- urine monitoring kit
- IUI procedure
- a follow-up appointment/ pregnancy scan
- Luteal support

Per cycle	£1,193.00
HFEA charge applied if IUI takes place (where applicable)	£45.00

Treatment - Superovulation Intrauterine Insemination Treatment Cycle (SO)

The charge includes:

- nurse appointment
- all serum monitoring
- ultrasound scans
- intrauterine insemination (IUI)
- luteal support (medication , if required after IUI)
- a follow-up appointment/ pregnancy scan

Per cycle	£1,418.00
HFEA charge – only if IUI takes place	£45.00

You may also need to make provision for medication charges. Medication charges are detailed in the 'Medication Charges' section below.

Treatment - Planned Egg Freezing

The charge includes:

- consultation to check consents and nurse appointment
- all stimulation monitoring
- egg collection
- a follow-up appointment

Per cycle	£3,547.00

There will also be a medication charge. Medication charges are detailed in the 'Medication Charges' section below.

If you plan to store your eggs, then freezing and storage charges will also apply. Freezing and storage charges are detailed below in the section 'Freezing and Storage for Eggs, Embryos and Sperm'.

Treatment - Planned Sperm Freeze

Consultation for consents	£270.00
Semen analysis and the process of freezing the sperm for storage	£479.00

If you plan to store your sperm, then storage charges will also apply. Freezing and storage charges are detailed below in the section 'Freezing and Storage for Eggs, Embryos and Sperm'.

Treatment - Thawing of Frozen Eggs, Insemination and Frozen Embryo Transfer

A consultation will be required before this can be planned, as you may need an ultrasound scan and/or further investigations. These will be discussed with you at your consultation.

The charge will include:

- consultation to check consents and nurse appointment
- thawing of eggs
- insemination/injection and culture to blastocyst stage
- embryo transfer
- a follow-up appointment/ pregnancy scan
- Luteal support (will be charged as per frozen replacement cycle and will depend on the type of cycle. Treatment: Frozen replacement cycle with Medication (HRT); Treatment: Frozen replacement cycle (Natural Modified natural)

Per cycle	£2,742.00
HFEA fee is payable when cryopreserved eggs are thawed and mixed with sperm (even if no embryos develop)	£120.00

Treatment - Egg Recipient Cycle

This treatment is only provided for a known donor. Charges paid by the egg recipient include the following and will vary depending on medication used.

Related to the *donor:*

- consultations x2
- donor administration
- all screening
- all monitoring
- egg collection
- egg freeze
- a follow-up appointment

Related to *recipient*:

- consultations x2
- investigations
- medication
- monitoring
- insemination and embryo transfer
- luteal support (medication following embryo transfer)
- a follow-up appointment/ pregnancy scan
- freezing and storage for 1 year

Per cycle including HFEA charge of £120.00 (which only applies if there is embryo transfer)	Between approximately £9,475 depending on medication used.

Counselling is mandatory and free of charge.

Treatment - Embryo Recipient

All charges are paid by the embryo recipient- these are split below into donor related and recipient related charges.

Related to the *donor*:

- donor consultations x 2
- mandatory blood screening of egg donor and sperm donor
- administration charges

Related to the *recipient*:

- consultations x2
- ultrasound scan
- medication
- the first frozen replacement cycle transfer (any subsequent replacement cycle charged separately)
- a follow-up appointment/ pregnancy scan
- freezing and storage for 1 year

There may be travel costs associated with the donor which will need to be covered by the recipient

Per cycle- includes £120.00 HFEA charge (only if there is embryo transfer)	Approximately £6,100 *Please note that this excludes any travel costs associated with the donor which will need to be covered by the recipient.*
If after embryo transfer, you have a positive urine pregnancy test, you will require additional 9 weeks of luteal support medication	£1,168.00

Counselling is mandatory and free of charge.

Treatment - Sperm Donor Recipient

You will need to have a consultation with investigations before commencing treatment. At the consultation, you will be advised which kind of treatment is most appropriate- including proposed number of cycles. We cannot supply your sperm directly to you; rather, you will need to purchase directly from a licenced supplier. Our Andrology staff will help you obtain the most appropriate samples for your treatment and ensure that the samples are sent directly to our centre.

There will be a storage cost associated with the purchase of any donor sperm as shown in our storage charge table in section Freezing and Storage for Eggs, Embryos and Sperm on page 8 of this CTP.

Counselling is mandatory and free of charge.

Treatment – Known Sperm Donation

This is where sperm is donated for your treatment by someone you know (and is not available as an NHS funded treatment). The cost is the same regardless of natural insemination, superovulation, or IVF cycle.

Related to the *donor:*

- consultation x3
- all screening (including quarantine screening)
- semen analysis, freezing & test thaw

Related to *recipient*:

- freezing and storage for 1 year

Per donated sample	£3,613.00
This charge does not include natural insemination, superovulation, or IVF cycle charges. See page 2-4 for treatment charges.	

Sibling Samples

Purchase of donor sperm samples for sibling use – per cycle (this is only samples from donors recruited by the centre, there is no guarantee for this option)	£384.00

Counselling is mandatory and free of charge.

Treatment- Surrogacy Cycle

Charges will depend on your particular circumstances and will be discussed at consultation.

Exporting of Gametes

Export of your gametes/embryos within Great Britain and Northern Ireland to another clinic	£500.00
Export of your gametes/embryos outside Great Britain and Northern Ireland	£1,000.00

Medication Charges

Medication Related to IVF/ICSI Cycle

For fresh IVF/ICSI cycles, you will need down regulation medication and stimulation medication. You will have to pay for your medication before we give it to you. There is no charge for the hCG (or other trigger medication before egg collection).

Down Regulation Medication for IVF/ICSI or Planned Egg Freezing

Depending on your protocol	Starting from £63.00 per cycle

Stimulation Medication for IVF/ICSI or Planned Egg Freezing

Medication amount will vary from patient to patient and is determined by your history, blood and ultrasound tests. Any excess medication is non-refundable but if you require additional medication, there will be no extra charge

Based on a 11-day supply	£498.00 - £997.00 per cycle - depending on dose prescribed

Medication Related to Superovulation IUI

Medication for Superovulation Treatment Cycle

Stimulation medication – cost will depend on number of doses needed	£45.00 - £91.00 per dose – depending on dose prescribed

Freezing and Storage for Eggs, Embryos and Sperm

Two separate charges apply- payable at time of freezing:

Charge for freezing

Freezing	£319.00

Charge for storage (paid in advance)

Once you have material to freeze and store, we will discuss storage period with you.

One year	£275.00
Two years	£525.00
Five years	£1,275.00

Please note that if you are undergoing self-funded treatment and are no longer eligible for NHS funding any embryos/sperm in storage will also be self-funded.
