Guidance For Recording Medicines Originating In Secondary Care By General Practices in NHS Grampian

Introduction

Increasing numbers of patients are being prescribed medicines by secondary care clinicians who are then supplied by routes which do not require general practice prescribing. These medicines can be supplied by a number of different routes:

- Hospital only medicines supplied from hospital dispensaries.
- Medicines being monitored by secondary care clinicians at clinic review.
- Medicines supplied by third party homecare providers.
- HBP prescription via community pharmacies.

It is important that the hospital clinician informs the patients General Practitioner (GP) the name of the medicine being supplied, the dose and the likely duration of treatment. This information should then be recorded in the GP patient record. Similarly, when a decision is taken to amend the dose or discontinue the medicine, the practice must be informed.

The recording of these medicines on GP practice systems is inconsistent and there is a risk that patient safety is compromised if the software decision support systems do not recognise these medicines.

Note: This guidance is intended to outline a standardised process, which all practices are encouraged to adopt; by recording appropriately the risk of harm to the patient is reduced by:

- Having a complete record of a patient's medication in the patient record will ensure this medication is considered if there a change in a patient's condition, e.g. renal, hepatic function, etc.
- Prescribing decision support software will alert the prescriber to any drug interaction involving the secondary care derived medicine.
- The medicine will be displayed on Emergency Care Summary/Key Information Summary improving medicines reconciliation in hospital and out of hours.
- Reduce the likelihood of a double supply.

The attached appendices provide a suggested method of recording these medicines in GP practice systems and all practices are requested to review their current process and to consider adopting the appropriate recommendation.

Please note that although the medication appears on the repeat medication list it will not print out along with other medications on the repeat order form.

Appendix 1 – Suggested Process For Recording Medication Originating in Secondary Care on Vision within GP Practices

1. Open a Patient Consultation
2. Click on **Therapy** tab
3. Click on **Repeats** tab
4. Start typing the name of the medication on the screen
5. This will open the **Repeat Master – Add** window
