

6.1 Appendix A - NHS Grampian Self-Management of International Normalised Ratio (INR) in Primary Care Assessment and Agreement

To be completed for all patients undertaking self-management of INR in Primary Care. Refer to NHS Grampian Guidance for Primary Care Patients (Adult) on Warfarin who are Self-managing their International Normalised Ratio (INR) Using Point of Care Coagulometers.

Patient Name:	GP Practice:		
Date of Birth:	Indication:		
CHI Number:	Target INR:		
Step 1: Assessment			Tick when completed
The patient is stable on life-long warfarin.			
The patient is willing to or has purchased system.	the CoaguChek	[®] INRange	
Benefits and risks have been discussed velocities but not limited to):	vith the patient (i	ncluding	
 Enhances quality of life, patient is appointments. Enables the patient to participate in condition. 	•		
 Misinterpreting results or inappropresulting in haemorrhage or throm 		loses	
An appointment has been arranged for th to undertake INR blood test monitoring, ir adjustment (steps 2-9).	•		
Date of appointment:

Designation:			

Step 2: INR to	esting using the CoaguChek® INRange system and e result	Tick when completed
Demonstrate	How to set up the machine (if not already done).	
	How to use the Code Chip that comes with each pack of test strips.	
	How to check the expiry date before using each test strip.	
	How to obtain the blood sample.	
	How to test the blood sample using the CoaguChek® INRange system.	
Explain	How to read the results on the CoaguChek® INRange system.	
	The patient's target INR and acceptable INR range.	
	Frequency of INR testing required as per patient's schedule (referring to the dose adjustment chart).	
	The preferred timing of tests.	
	Tests should be undertaken in the morning on a week day (Monday-Friday) so that patients can contact their Primary Care Team if they need advice on the result and dose adjustment.	
	How to safely dispose of waste generated during INR testing (sharps, other contaminated waste and packaging) as per NHS Grampian Waste Management Policy.	
	Explain how to record the INR result in the anticoagulant (yellow) book.	
•	patient undertaking the above until deemed competent sting independently.	
The number of supervised INR tests before commencing testing independently will depend on the individual patient and may require more than one appointment with a Healthcare Professional.

Explain that the patient must attend the INR clinic with the Primary Care Team for a face to face review in 3 months' time and then again every 6 months. Three month appointment date: Six month appointment date: Usual warfarin counselling should be given during these reviews, e.g. bruising, bleeding, diet, etc. Explain that the patient must bring the following to their appointments: Anticoagulant (yellow) book for review of INR results and dose adjustments. CoaguChek® INRange device for an 'external quality control procedure'. Explain the 'external quality control procedure': INR test will be performed on both the patient's device and the Primary Care Team coagulometer. If INR results from both coagulometers are within 0.5 of each other, assessment would be considered satisfactory. If the INR results from both coagulometers is outwith 0.5 of each other the patient should be advised to stop self-managing and seek advice as per the manufacturer's instructions. The patient will be required to attend the Primary Care INR clinic for testing until the monitor is repaired or replaced. The patient will be required to participate in an assessment of technique and device at the Primary Care INR clinic if the external quality control procedure described above is unsatisfactory on more than one occasion. Record the appropriate read code in the patient's file: #66Q2 – follow up warfarin assessment. #66QB – annual warfarin assessment.	Step 4: Primary Care Team Review	Tick when completed
Six month appointment date: Usual warfarin counselling should be given during these reviews, e.g. bruising, bleeding, diet, etc. Explain that the patient must bring the following to their appointments: • Anticoagulant (yellow) book for review of INR results and dose adjustments. • CoaguChek® INRange device for an 'external quality control procedure'. Explain the 'external quality control procedure': • INR test will be performed on both the patient's device and the Primary Care Team coagulometer. • If INR results from both coagulometers are within 0.5 of each other, assessment would be considered satisfactory. • If the INR results from both coagulometers is outwith 0.5 of each other the patient should be advised to stop self-managing and seek advice as per the manufacturer's instructions. The patient will be required to attend the Primary Care INR clinic for testing until the monitor is repaired or replaced. • The patient will be required to participate in an assessment of technique and device at the Primary Care INR clinic if the external quality control procedure described above is unsatisfactory on more than one occasion. Step 6: What to do when things go wrong	Tick when completed
 Explain that the patient must contact the Primary Care Team when: Required to as per the dose adjustment charts. Issues with testing or titrating doses occur. 	
Advise the patient to refer to the CoaguChek® INRange User's Manual if they experiences issues with the device.	
If issues continue the patient should contact the manufacturer and attend the Primary Care INR clinic for testing until the monitor is repaired or replaced and has had a successful external quality control re-checked.	
Advise the patient to contact the Primary Care Team with issues with supply of test strips and other consumables.	
The patient should be advised to contact the Primary Care Team if using more than 12 strips in a 6 month period as a more frequent review may be needed.
